

AI AGENTS & AUTOMATION

MASTER PROGRAM

— PROFESSIONAL CERTIFICATE PROGRAM —

Build production-ready AI Agents, Autonomous Workflows, Multi-Agent Systems and Business Automations.

AI Agents

Workflow Automation

Multi-Agent Systems

MCP Integration

No-Code Automation

AI Applications

ChatGPT

Claude

Gemini

n8n

Dify

OpenRouter

MCP

Build AI Agents

Design intelligent agents that solve real problems.

Automate Business Workflows

Eliminate manual tasks and increase operational speed.

Deploy Real-World Systems

Ship production-ready systems with confidence.

80+ Hours Learning

Live Cohort Training

Capstone Projects

Career Mentorship

WHY THIS PROGRAM EXISTS

The world runs on AI agents now.

Most people are still watching from the sidelines.

AI agents are transforming how work gets done. They plan, decide, and act—across tools, databases, and teams.

This program exists to help you build those agents and lead the automation era.

WHY NOW

- AI agents are replacing repetitive workflows
- Organizations need automation talent immediately
- Agent builders are becoming strategic assets

01

Learn by Building

Build real AI agents through guided projects.

02

No Code / Low Code

Create powerful automations without heavy engineering.

03

Career-Ready from Day 1

Skills, portfolio, and confidence to stand out immediately.

WHO SHOULD JOIN

Students

Fresh Graduates

Working Professionals

Data Analysts

Developers

Freelancers

Business Owners

TOOLS YOU'LL WORK WITH

ChatGPT

Claude

Gemini

Dify

n8n

Flowise

LangFlow

CrewAI

Supabase

OpenClaw

MCP

Make

Perplexity

NotebookLM

WEEK 1 • DAYS 1-5

AI Foundations & Core Concepts

Everything you need to understand how modern AI systems work before you begin building agents, workflows, and automations.

Learn the language, architecture, economics, and safety principles that power real-world AI deployments.

WHAT YOU'LL MASTER THIS WEEK

— BY THE END OF WEEK 1

You will understand how modern AI systems operate, communicate with models through APIs, design reliable prompts, evaluate model capabilities, and confidently assess the strengths and limitations of agent-based architectures.

Understand the AI ecosystem

Evaluate model capabilities

Build a strong AI foundation

WEEK 2 • DAYS 6–10

AI Agents & Intelligent Systems

Move beyond understanding AI and start building intelligent systems.

This week focuses on chatbots, retrieval systems, AI applications, and autonomous agents that can reason, access knowledge, and perform real-world tasks.

WHAT YOU'LL MASTER THIS WEEK

01

Conversational AI & Chatbot Design

Build multi-turn conversational systems with memory, context awareness, and natural interactions that feel intelligent and helpful.

02

Knowledge Retrieval & RAG Foundations

Learn how agents access external knowledge sources such as PDFs, websites, and internal documents to answer questions accurately.

03

Advanced RAG & Grounded Responses

Create retrieval systems that handle multiple sources, maintain accuracy, cite references, and reduce hallucinations.

04

AI Applications with Dify, Flowise & Custom GPTs

Build complete AI applications visually using modern no-code platforms and create custom assistants tailored to specific workflows.

05

Autonomous Agents & Multi-Step Reasoning

Design agents that plan tasks, use tools, access information, and execute multi-step actions with minimal human intervention.

BY THE END OF WEEK 2

You will be able to build conversational AI systems, create knowledge-powered assistants, develop AI applications using no-code platforms, and design autonomous agents capable of completing real-world tasks.

Build intelligent chatbots

Create knowledge-powered AI systems

Design autonomous agents

WEEK 3 • DAYS 11–15

Automation & Business Systems

Connect AI systems to real business operations and learn how modern organizations automate content, communication, workflows, and cross-platform processes.

This week focuses on automation architecture, business integrations, and building systems that run with minimal human involvement.

WHAT YOU'LL MASTER THIS WEEK

01

Content Automation Systems

Design AI-powered content workflows that automate research, writing, formatting, repurposing, and publishing across multiple channels.

02

AI Video & Multimodal Creation

Build systems that generate videos, voiceovers, visual assets, and multimedia content from simple prompts and scripts.

03

Workflow Automation with n8n

Learn how automation platforms connect applications, respond to triggers, process data, and execute workflows without manual intervention.

04

Business Integrations & Operational Automation

Connect CRMs, spreadsheets, messaging platforms, email systems, and databases into unified business workflows that operate automatically.

05

Cross-Platform Automation Architecture

Understand how platforms such as n8n, Make.com, and other automation ecosystems differ and how to choose the right solution for each business scenario.

BY THE END OF WEEK 3

You will be able to design automation workflows, connect business applications, build content-generation systems, orchestrate operational processes, and deploy automations that save time, reduce manual work, and improve efficiency.

Automate business workflows

Connect apps and systems

Deploy real-world automations

Advanced Agents, Deployment & Your AI Employee

Transform individual AI systems into autonomous digital workers capable of handling tasks, collaborating with other agents, and operating in real-world environments.

This week focuses on deployment, memory, orchestration, multi-agent collaboration, and launching your own AI Employee.

WHAT YOU'LL MASTER THIS WEEK

01

Your Personal AI Employee

Configure and deploy an AI assistant capable of interacting through communication channels, accessing tools, and performing meaningful real-world actions.

02

Persistent Memory & Long-Term Context

Design AI systems that remember projects, track progress over time, retain context, and operate continuously across extended workflows.

03

Multi-Agent Collaboration & Orchestration

Build intelligent systems where specialized agents work together, share information, coordinate decisions, and complete complex objectives.

04

Production Deployment & System Integration

Learn how to connect agents, workflows, automation platforms, and business systems into production-ready solutions.

05

Capstone Development & Portfolio Readiness

Combine everything learned throughout the program into a complete AI Business Automation Suite and prepare it for demonstration, portfolio presentation, and real-world deployment.

— BY THE END OF WEEK 4

You will be able to deploy autonomous AI systems, design multi-agent workflows, build AI Employees with memory and task management capabilities, and launch production-ready solutions that deliver measurable business value.

Deploy autonomous AI systems

Orchestrate multi-agent workflows

Launch your AI Employee

WHAT YOU WALK AWAY WITH

Not a certificate. A career.

Every outcome below is something you have built, deployed, and can demonstrate on day one of a job interview, freelance proposal, consulting engagement, or client pitch.

PORTFOLIO AT GRADUATION

CORE PROFESSIONAL CAPABILITIES

- 01 Prompt Engineering**
Write prompts that produce reliable, structured, repeatable outputs.
- 02 Workflow Automation**
Connect apps and automate business processes end-to-end.
- 03 AI Agent Building**
Create agents that reason, remember, use tools, and act autonomously.
- 04 RAG & Knowledge AI**
Build assistants grounded in private knowledge and business data.
- 05 Production Deployment**
Deploy applications and systems for real-world use.
- 06 Monetisation**
Package solutions as freelance services, consulting offerings, or products.

WHERE THIS CAN TAKE YOU

THE MARKET OPPORTUNITY

40%+

AI and automation roles grew year-over-year across India.

₹15K–₹75K

Typical freelance automation project value.

1 PROJECT

One completed automation project can recover the entire program investment.

ENROL NOW • COHORT 1

One month. One decision. One career shift.

The next twelve months will pass either way.

The only question is whether you spend them consuming AI or building with it.

THE INVESTMENT

~~₹49,999~~

₹14,999

SAVE ₹35,000 (70%)

COHORT 1 LAUNCH PRICE

Founding Cohort • Limited to a select group of early participants

YOUR COMPLETE BUILD STACK

01

LEARN

- 20 Live Instructor-Led Sessions
- 80+ Hours Hands-On Learning
- 10+ Real Projects & Assignments

02

BUILD

- AI Business Automation Suite Capstone
- Your Own AI Employee (Moltbot)
- Production-Ready Portfolio Assets

03

LAUNCH

- NeuralVarsity Certification
- Community & Peer Network
- Session Recordings & Career Support
