

AI AGENTS & AUTOMATION

MASTER PROGRAM

— PROFESSIONAL CERTIFICATE PROGRAM —

Build production-ready AI Agents, Autonomous Workflows, Multi-Agent Systems and Business Automations.

AI Agents

Workflow Automation

Multi-Agent Systems

MCP Integration

No-Code Automation

AI Applications

ChatGPT

Claude

Gemini

n8n

Dify

OpenRouter

MCP

Build AI Agents

Design intelligent agents that solve real problems.

Automate Business Workflows

Eliminate manual tasks and increase operational speed.

Deploy Real-World Systems

Ship production-ready systems with confidence.

80+ Hours Learning

Live Cohort Training

Capstone Projects

Career Mentorship

WHY THIS PROGRAM EXISTS

The world runs on AI agents now.

Most people are still watching from the sidelines.

AI agents are transforming how work gets done. They plan, decide, and act—across tools, databases, and teams.

This program exists to help you build those agents and lead the automation era.

WHY NOW

- AI agents are replacing repetitive workflows
- Organizations need automation talent immediately
- Agent builders are becoming strategic assets

01

Learn by Building

Build real AI agents through guided projects.

02

No Code / Low Code

Create powerful automations without heavy engineering.

03

Career-Ready from Day 1

Skills, portfolio, and confidence to stand out immediately.

WHO SHOULD JOIN

Students

Fresh Graduates

Working Professionals

Data Analysts

Developers

Freelancers

Business Owners

TOOLS YOU'LL WORK WITH

ChatGPT

Claude

Gemini

Dify

n8n

Flowise

LangFlow

CrewAI

Supabase

OpenClaw

MCP

Make

Perplexity

NotebookLM

WEEK 1 • DAYS 1-6

AI Foundations, Prompt Engineering & APIs

Build a strong foundation in modern AI, understand how today's AI ecosystem works, and develop the professional setup needed to begin your AI journey.

Learn prompt engineering, APIs, sandbox environments, token optimization, context engineering, and responsible AI practices through practical hands-on sessions.

WHAT YOU'LL MASTER THIS WEEK

— BY THE END OF WEEK 1

You will understand the modern AI ecosystem, build your professional AI presence, design reliable and responsible prompts, work confidently with AI APIs and sandbox environments, and optimize token and context usage for efficient AI workflows.

Understand the AI ecosystem

Design reliable AI prompts

Work efficiently with APIs & context

MCP, AI Agents & Agentic Systems

Move from foundational AI skills into connected systems that can access tools, external data, files, and real-world resources.

This week focuses on MCP, Claude Desktop integrations, your first practical AI agent workflow, and the architecture, memory, reasoning, safety, and orchestration principles behind Agentic AI.

WHAT YOU'LL MASTER THIS WEEK

BY THE END OF WEEK 2

You will be able to connect AI models with external tools through MCP, build and demonstrate your first practical AI agent workflow, and design agent architectures with goals, memory, reasoning, tools, human oversight, guardrails, and multi-agent collaboration.

Connect AI with external tools

Build your first AI agent workflow

Design agent architectures

No-Code AI Agents, RAG & Knowledge Systems

Move from agent architecture into practical no-code platforms and learn how AI workflows, agents, tools, and knowledge bases work together.

This week focuses on Dify, n8n, CrewAI, Zapier, Retrieval-Augmented Generation, vector search, knowledge systems, and building a production-style RAG assistant.

WHAT YOU'LL MASTER THIS WEEK

01

No-Code AI Agent Platforms

Explore Dify, n8n, CrewAI and Zapier, and understand how triggers, nodes, agents, tools, variables, knowledge bases and workflows are used to build practical AI automations.

02

Agent Orchestration & Automation

Compare workflow automation with agent-based orchestration and learn how different platforms handle reasoning, integrations, sequential tasks, multi-agent collaboration and business automation.

03

RAG & Knowledge Retrieval

Understand Retrieval-Augmented Generation, document ingestion, OCR, parsing, metadata, chunking and how AI systems use external knowledge to generate more accurate and grounded responses.

04

Embeddings, Vector Search & Modern RAG

Learn embeddings, vector databases, semantic and hybrid search, Top-K retrieval, context injection, grounded generation, source citations and modern RAG approaches.

05

Production RAG Systems

Design and build a production-style RAG assistant with multiple documents, optimized retrieval, conversation context, citations, scalable knowledge-base architecture and accurate document-based responses.

BY THE END OF WEEK 3

You will be able to build AI workflows across leading no-code platforms, create document-grounded RAG applications, understand embeddings and vector retrieval, and design a production-style AI knowledge assistant with citations and conversation context.

Build no-code AI workflows

Create grounded RAG systems

Build a production knowledge assistant

Intelligent Automation, AI UGC & Content Systems

Turn AI knowledge into complete systems that combine RAG, web search, APIs, LLMs, external tools, and workflow automation to solve real business problems.

This week also moves into AI UGC creation and automation—covering scripts, avatars, voices, video production, content factories, multi-agent workflows, publishing, and scalable content pipelines.

WHAT YOU'LL MASTER THIS WEEK

01

End-to-End Intelligent Automation

Combine RAG, web search, APIs, LLMs, knowledge bases and workflow automation to design and build complete AI systems that solve real-world business problems.

02

AI UGC Strategy & Scriptwriting

Learn UGC strategy, audience research, high-converting content psychology, PAS, AIDA and BAB frameworks, hook writing, storytelling, CTAs and campaign storyboarding.

03

AI Avatars, Voice & Video Production

Create AI avatars, digital humans, lip-synced voices, voiceovers, B-roll and AI video, then edit complete UGC content with captions, music, motion graphics and platform optimization.

04

AI UGC Automation & Content Factories

Build automated content workflows using triggers, actions, variables, APIs, webhooks, AI agents and memory across Dify, n8n, Zapier and CrewAI.

05

AI Content Pipelines, Publishing & Scaling

Automate research, scripts, image and video prompts, captions, hashtags, thumbnails and publish-ready content packages while learning multi-agent orchestration, workflow optimization and scalable publishing.

BY THE END OF WEEK 4

You will be able to build end-to-end AI automations that combine RAG, web search, APIs and workflows, create complete AI UGC content, and automate research, scripts, visuals, captions and publishing through scalable AI content systems.

Build intelligent AI automations

Create complete AI UGC content

Automate content at scale

AI Application Development & Integrated AI Systems

Move from AI workflows into complete applications and learn how modern AI app builders turn natural-language instructions into functional, deployable software.

This week focuses on prompt-to-app development, UI/UX, application architecture, deployment, APIs, webhooks, and integrating AI applications with automation workflows to build complete end-to-end systems.

WHAT YOU'LL MASTER THIS WEEK

01

AI App Builders & Prompt-to-App Development

Explore Lovable, Bolt, Replit AI, Emergent, Firebase Studio, v0 and Cursor while learning AI-assisted development, AI SDLC, prompt-to-code, prompt-to-app and full-stack application architecture.

02

AI Application Design & Deployment

Learn frontend and backend architecture, databases, authentication, APIs, UI/UX, responsive design, Supabase, Firebase, AI integrations, GitHub integration, MVP planning and live deployment.

03

Build Your First AI Application

Turn a real business problem into a complete AI-powered web application by planning features, designing the interface, engineering prompts, integrating AI functionality, testing and deploying with Lovable.

04

AI Application + Automation Integration

Connect AI applications with workflows built in Dify, n8n, Zapier or CrewAI using APIs, JSON requests and responses, webhooks, business logic and frontend-backend integration.

05

Production End-to-End AI Systems

Build, test and deploy a production-style AI system where application inputs flow through automation workflows and AI models before returning intelligent results to the user interface.

BY THE END OF WEEK 5

You will be able to design, build and deploy complete AI-powered web applications, connect them with automation workflows through APIs and webhooks, and create production-style end-to-end AI systems that process real user inputs and return intelligent results.

Build complete AI applications

Connect apps with AI automation

Deploy end-to-end AI systems

Production AI Agents, Automation & Security

Move from building AI applications and workflows into production-ready agents that can communicate, remember, browse, use tools, run scheduled tasks, and operate across real-world systems.

This final week focuses on OpenClaw, agent workspaces and memory, browser automation, skills, scheduling, MCP integrations, security, and building a complete production AI agent.

WHAT YOU'LL MASTER THIS WEEK

01

OpenClaw & Agent Configuration

Set up OpenClaw, configure LLM providers, understand the gateway, runtime and sessions, and connect agents to Telegram or Discord for real-world communication.

02

Agent Workspace, Identity & Memory

Design personalized agents using workspace files, identity, user context, instructions, tools and persistent memory to create consistent behavior across conversations and sessions.

03

Skills, Browser Automation & Scheduling

Equip agents with reusable skills, automate web navigation, form filling and data extraction, then run recurring workflows using cron jobs, heartbeats and background automation.

04

Security, MCP & Enterprise Integrations

Secure agent deployments with credential management, permissions and Bitwarden, then connect MCP servers and Zapier MCP to give agents controlled access to external tools and resources.

05

Build a Production AI Agent

Combine memory, messaging, browser automation, skills, scheduling, MCP, secure credentials and external tools into an end-to-end OpenClaw agent built for real-world business automation.

BY THE END OF WEEK 6

You will be able to configure and customize OpenClaw agents, give them memory, tools, browser automation and scheduled workflows, secure their credentials and permissions, connect external systems through MCP, and build a complete production AI agent for real-world automation.

Build production AI agents

Automate real-world tasks securely

Connect tools, memory & workflows

WHAT YOU WALK AWAY WITH

Not a certificate. A career.

Every outcome below is something you have built, deployed, and can demonstrate on day one of a job interview, freelance proposal, consulting engagement, or client pitch.

PORTFOLIO AT GRADUATION

CORE PROFESSIONAL CAPABILITIES

WHERE THIS CAN TAKE YOU

THE MARKET OPPORTUNITY

40%+

AI and automation roles grew year-over-year across India.

₹15K–₹75K

Typical freelance automation project value.

1 PROJECT

One completed automation project can recover the entire program investment.

ENROL NOW • COHORT 1

One month. One decision. One career shift.

The next twelve months will pass either way.
The only question is whether you spend
them consuming AI or building with it.

THE INVESTMENT

~~₹49,999~~

₹14,999

SAVE ₹35,000 (70%)

COHORT 1 LAUNCH PRICE

Founding Cohort • Limited to a select group of early participants

YOUR COMPLETE BUILD STACK

01

LEARN

- 36 Live Instructor-Led Sessions
- 80+ Hours Hands-On Learning
- 10+ Real Projects & Assignments

02

BUILD

- AI Business Automation Suite Capstone
- Your Own AI Employee (Moltbot)
- Production-Ready Portfolio Assets

03

LAUNCH

- NeuralVarsity Certification
- Community & Peer Network
- Session Recordings & Career Guidance
